Specification
For a Heating Apparatus.

To all whom it may concern:

Be it known that I, Frank Moser, of the City of Toronto, in the County of York, in the Province of Ontario, kinasmith, have invented,

a certain new and useful improvement on heating apparatus and I do hereby declare that the following is a full, clear, and exact description of the same: Fig 1. of the annexed drawings gives a back view of a drum embodying my invention. The first part of said invention relates to a Metallic Coil securely fixed in the inside of a drum, the one extremity of said coil comes out at the top of the drum on either side of the collar, the other extremity comes out at the lower side of the back part of the drum.

The second part of my invention relates to a tube, the small end of which unites with the lower extremity of the coil, the large end of said tube receives the cold air from the floor, the cold air being thus conducted from the floor into the coil, passes three times through the hot draught from the stove below (once at the bottom and twice at the top collar) after which it can be conducted by means of a small pipe to any part of the house, or let out at the top of the drum. Fig 1. A the drum, B.C. the top and bottom collars, D. the door by which the apparatus is cleaned out, E the cold air entrance, or the lower extremity of the coil, F the first circuit of coil, G the end of the second circuit of coil.

Fig 2. ^{aa} The cold air tube, is the upper end of said tube which joins E in Fig 1. C the lower end of said tube which receives the cold air from the floor.

I make no claim whatever to the drum in which my invention is fixed. It consists in

What I claim as my invention is, "The Metallic Coil^{BC} and the tube^{AA} to conduct the cold air into the said coil." substantially as and for the purpose hereinbefore set forth.

Frank Moses

Toronto 8th day of December 1874.

Signed in the presence of: Philip Williams
C. H. Williams

This is the Specification referred to in the affidavit of Frank Moses hereto annexed Sworn before me this 8th day of December a.d. 1874.

J. H. McCreary J. C.

Fig 2. ^{aa} The cold air tube, is the upper end of said tube which joins E in Fig 1. C the lower end of said tube which receives the cold air from the floor.

I make no claim whatever to the drum in which my invention is fixed. It consists in

What I claim as my invention is, "The Metallic Coil^{BC} and the tube^{AA} to conduct the cold air into the said coil." substantially as and for the purpose hereinbefore set forth.
